< TECHNICAL PROJECTS >

D'well Together - [Front-End Github](#) | [Back-End Github](#)

A web-based organizational system for communal living situations.

- Built using a Rails MVC API and React.js with Redux front end to optimize access to database and dynamic rendering
- Designed front-end elements with Materialize CSS and Materialize React
- Implemented user authentication and authorization on both front end and back end

New2Neighborhood - [Front-End Github](#) | [Back-End Github](#)

A restaurant and bar locator for those new to a neighborhood.

- Incorporated Foursquare API to seed database with food and drink venues
- Utilized Google Maps API and geolocation to display venues in a user's proximity
- Created a Rails MVC API to link to the React.js front-end
- Designed front-end elements with Materialize CSS and Materialize React
- Executed user authentication and authorization on both front end and back end

< WORK EXPERIENCE >

Cognizant Technology Solutions, Inc., New York, NY
